## Storm equips demolition company, Hookstone Group with instant communication technology

### Challenge

The construction industry had 40 fatalities and 61,000 injuries last year, significantly higher than other workplaces, according to the Health and Safety Executive. Demolition is complex and challenging work which requires significant pre-planning and the ability to communicate quickly and effectively.

With lives and livelihoods at stake, demolition companies must be able to demonstrate absolute compliance with health and safety. Hookstone Group is a fast-growing demolition specialist, working for main contractors.

## Solution

Hookstone Group has equipped its on-site workforce with market-leading instant communications technology to help improve health and safety in the sector.

The company has invested in rugged handsets and software supplied by Storm. Storm enables Hookstone's staff to communicate instantly and reliably with site-based operatives and helps manage their safety in dangerous working

environments where mobile phones are banned.

Storm also enables Hookstone to quickly locate operatives in the event of an accident through its Man Down alarm and monitors when workers enter and leave sites.

Its state-of-the-art handsets have replaced traditional walkie talkies.

"Safety is always paramount in our industry and STORM is helping us to protect people on site and make sure they get home safe and well at the end of every working day.

"We continue to expand as a result of repeat business with main contractors which value our ability to deliver a first-class service in complex and challenging conditions."

**GEORGE JOHNSON,**

Founding Director of Hookstone Group

## Results

Storm said its construction industry clients have reported improved safety, increased compliance and reduced communications spend since adopting its technologies.
