

Leeds Bradford Airport transforms operations with Storm's PTTToC Solution

About Leeds Bradford Airport

Leeds Bradford Airport (LBA), Yorkshire's largest airport, is situated in Yeadon, West Yorkshire, just seven miles from Leeds city centre. With a continuous increase in passenger numbers, LBA aims to provide a superior travel experience while prioritising passenger safety. The airport has made significant investments in both personnel and technology to achieve these goals.

Solution

To enhance safety, efficiency and productivity in their complex day-to-day operations, Leeds Bradford Airport chose to upgrade its existing two-way radio system to Storm's cutting-edge Push-to-Talk over Cellular (PTTToC) solution.

This innovative technology allows for instant communication between individuals and groups across the entire airport. Additionally, Storm's command console serves as a centralized command and control centre, facilitating the management of airport employees.

The console enables location monitoring, employee tracking, and SOS emergency alerts, ensuring the well-being of staff members.

By adopting Storm's PTTToC platform, LBA became one of the pioneering airports in Europe to transition from traditional two-way radios to this advanced cellular-based communication system.

Results

With Storm's world-leading technologies, LBA is successfully managing its operations and achieving its business objectives. Damian Ives, the Chief Operating Officer at LBA, expressed his satisfaction, stating:

The collaboration with the Storm team throughout the implementation of the new technology was exceptional. They were fantastic to work with and provided unwavering support at every stage of the introduction of the new technology. Our employees have embraced the solution which is highly intuitive and user-friendly.

Storm's world-leading technologies are helping us to manage our operations and achieve our business objectives. It is already delivering notable improvements in operational efficiencies and productivity.

By implementing Storm's PTTtoC solution, LBA has positioned itself at the forefront of airport communication technology, ensuring passenger safety and providing a seamless travel experience for its growing number of passengers.
