Lone worker

Maintaining the safety and well-being of lone workers and remote workforces is essential. Storm's world-class lone worker feature makes it possible to quickly and easily track and locate employees as well as send emergency alerts to help protect their welfare and keep them safe.

Our lone worker solution is a valuable safety feature for workers who operate in remote areas or who work alone. It can help to prevent accidents and injuries, provide assistance in the event of an emergency and provide peace of mind for workers and their supervisors.

Features of the Storm lone worker solution

⚡ **Push-to-alert**

⚡ **Emergency alerts**

⚡ **Keep alive feature**

⚡ **Device inactivity monitoring**

⚡ **Detection of falls, impacts, still position**

⚡ **Automatic events recording**

> Safety is always paramount in our industry and Storm is helping us to protect people on site and make sure they get home safe and well at the end of every working day.

Storm's lone worker benefits

Increased employee safety

Lone worker can help to keep employees safer by monitoring them and sending alerts in the event of an emergency.

It enables employees to be periodically checked, in real time, either directly, via the application, or by detecting their behaviour using sensors on the device. These include if the device tilts, or is shaken or dropped, to detect falls. No movement/device inactivity or high speed can also be detected.

To use this checking feature, lone worker mode must be activated. It can be activated by either an on-screen button or an emergency button. As soon as it is activated, a timer starts and the system will begin to check on the employee by activating an alarm, at regular intervals. Parameters, including time between alarms, are defined in the dispatch console prior to activation.

If the employee does not respond to the alarm within a pre-defined length of time, the alarm is escalated to a dispatcher and an emergency event is triggered to enable help to be sent.

An employee can respond to the alarm to confirm that they are safe in a number of ways:
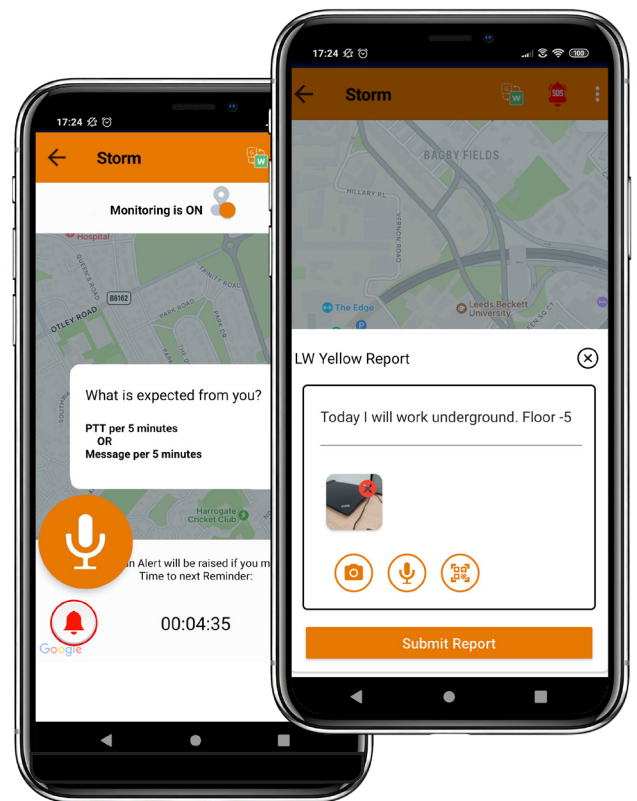

⚡ Press the PTT button or instant message which goes to a default radio channel to indicate their safety

⚡ Enter a PIN code

⚡ Click the I am OK button

Peace of mind

Knowing that there is a way to monitor employees and get help in the event of an emergency is reassuring for lone and remote workers, their families and their employers.

Improved compliance

Lone worker can helps businesses to comply with safety regulations by keeping employees safer and protecting their well-being.
