IPRS™ Recording platform

Storm's patented IPRS[™] recording platform records, retrieves and plays back one-to-one and group push-to-talk communications. The IPRS[™] Recording Server is a dedicated centralized repository for push-to-talk over cellular audio recordings.

The IPRS[™] recording platform is an integral part of Storm's IPRS[™] push-to-talk over cellular solution.

Features of the Storm IPRS[™] Recording platform

- One-to-one and group recordings of incoming and outgoing calls
- Record all calls or selective sessions
- Record sessions of specific users and groups
- Encrypted voice recording support
- 🔶 User interface in multiple languages
- Intuitive retrieval of recorded sessions
- Option to save recording to local storage

We are investing heavily in people and technology to make sure that passengers have the best possible experience when travelling through Leeds Bradford Airport. Storm's world-leading technologies will help us to manage operations and achieve our ambitions. As a regional airport, we plan our development with the local economy, environment and stakeholders in mind and we are delighted to be working with Storm, a local company with world-leading technology.

DAMIAN IVES Chief Operating Officer at LBA

Benefits of the Storm recording platform

Incident support

When an emergency or a critical event needs to be investigated, it may be necessary to check employee conversations. The Storm IPRS™ recording platform makes the retrieval and playback of the required push-to-talk voice recordings quick and simple.

Improved efficiency

Incoming and outgoing calls are automatically recorded for incident debriefing and to improve decision making and business efficiencies. It is possible to easily locate and review the relevant sections of conversations and act accordingly.

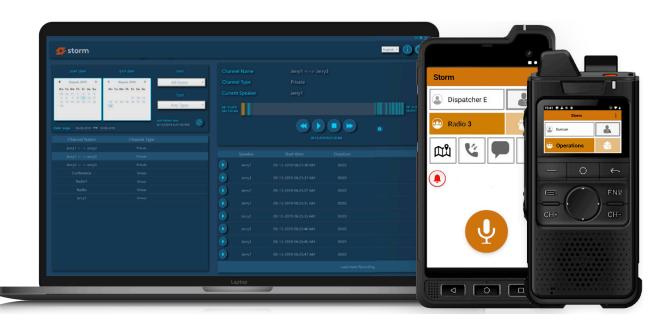

Improved employee management

Recorded conversations can be used to analyse the performance of employees and assess workload, enabling necessary measures to be taken as required.

User-friendly

The IPRS[™] recording platform is intuitive and user friendly. All functionalities are accessible from one screen and operations can be carried out by simply clicking the relevant icons.

Using a range of filters, including date and time range, username and channel type, it is possible to quickly retrieve recordings from the recording server.

We have invested in STORM Intelligent Communications to secure the health and safety of our people and help increase productivity while we meet growing demand.
